Reasons For Allowance

The prior art of record does not disclose or fairly suggest a system and method for tracking eye movement comprising a ring member attachable to an eye with a light color in an inner ring and a dark color on an outer ring the different colors being contrastive with each other, a means for directing light spots onto the ring member, a means for detecting the reflections of the light from the ring member and a means for determining eye movement from the reflections. Prior art to Frey et al. in U.S. Patent 6,315,773 teaches tracking of eye movements using spots of light projected on natural boundaries of the eye such as the pupil and the iris, and to use artificial markings on the eye in stead of the natural boundaries, but does not teach providing a natural boundary on a ring attached to the eye. Eye rings are known in the art, but none teach providing an artificial boundary with good contrast for use in tracking eye movement.
